

-- ABSTRACT OF THE DISCLOSURE

A host device evaluates the writing quality of an ID for management based on digital information showing the writing quality of the ID for management received from an information terminal through a communication network. The host device also executes a correction of information relative to various conditions for marking the ID for management to a semiconductor wafer in accordance with results of the evaluation. Information relative to the evaluation results is transmitted to a terminal for accounting/money collection through the communication network. The terminal for accounting/money collection receives information of the number of writing times transmitted from the terminal, and the information relative to the evaluation results and transmitted from the host device, and then calculates an effective writing time number of the ID for management. The terminal for accounting/money collection executes predetermined accounting processing and money collection processing based on these calculated results.--

REMARKS

The Abstract of the Disclosure was amended so that it is no more than 150 words in length. Early consideration and allowance of Claims 1-3 are respectfully requested.
